

Lake Ecology Report

Jeff Keith 663-4230

Well, the work on the dam has been completed and the lake looks great. It is so wonderful to see the lake full again. Now our attention turns to making sure we return the natural beauty and health of this body of water. Rest assured whatever weeds appeared during the last two summers we can take care of. We are taking a very aggressive approach to surveys and treatment this spring. We will identify any problems and treat immediately. We have a very competent company in Allied Biological, who has been taking care of our lake for 30 years. They know the the areas of concern and how to deal with them. They are committed to bringing our lake back to its pristine condition. We have already started our weed treatment program this past fall with our treatment of Purple Loosestrife and Watershield. We rarely treat in the fall because the season is over by then, but we felt it was necessary to get a jump on two species that have become abundant the past two summers. These two species will be watched very carefully as the water starts to warm up. Lastly, thanks for your patience during the repair to our dam. It was very frustrating for all of us, especially on the board. I will keep you updated on surveys and treatment as they unfold. Any questions or concerns, don't hesitate to call me. Looking forward to a great summer!
